SmartDitch ditch lining system

Problems with current ditch and channel systems are well known within the industry and include high costs, long lead times, complex installations and deterioration. SmartDitch is a long-term solution to these problems. The flexible design allows the lining system to solve water management challenges above ground. Man-

ufactured by Penda Corporation, SmartDitch is a corrugated plastic lining that can fit into the meandering course of an existing ditch or be placed over existing concrete-lined and subsurface systems with little preparation. SmartDitch is also less expensive than concrete or subsurface systems. For more information please e-mail info@smartditch.com or visit www.smartditch.com.
